Summary

Data Science undergraduate at PUCIT building full-stack products with TypeScript, React, Node.js, and Supabase/PostgreSQL. Published an offline-first Android app on Google Play and built web, mobile, and AI systems. Seeking backend or full-stack software engineering roles.

Education

Punjab University College of Information Technology (PUCIT) <i>BS Data Science</i> Coursework: Data Structures & Algorithms, Database Systems, Object-Oriented Programming, Data Warehousing, Artificial Intelligence, Machine Learning	Expected 2028 <i>Lahore, Pakistan</i>
Government Postgraduate College Vehari <i>Intermediate in Computer Science (ICS)</i>	2022–2024 <i>Vehari, Pakistan</i>

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, C++
Frontend & Mobile: Next.js, React, React Native, Expo, Capacitor, HTML, CSS
Backend & APIs: Node.js, Express, REST API Design, OAuth 2.0
Databases: PostgreSQL, Supabase, RLS, pgvector, MongoDB, Redis
AI / ML: LangChain, RAG, GraphRAG, Scikit-learn, Pandas, NumPy
Tools: GitHub Actions, Docker, Git, Linux
“`latex`”

Projects

Tazkir – Offline Islamic Spiritual Companion Google Play | Website

- Published to Google Play and worked with 40+ testers to diagnose device-specific issues and stabilize release builds.
- Built an offline-first Android app with GPS prayer times, sensor-based Qibla, local notifications, and backup/restore.
- Added GitHub Actions for linting and Android builds while keeping user data on-device.

Fast Food Pro – Multi-Tenant Restaurant Platform GitHub | Website

- Built three integrated web and mobile applications for customer ordering, kitchen operations, and administration using a shared multi-tenant backend.
- Implemented realtime order synchronization with Supabase Realtime, Cloudinary media delivery, and GitHub Actions checks.

GitHub Reader AI – GraphRAG Repository Agent GitHub | Website

- Built a Node.js/Express service for natural-language questions about codebases using pgvector semantic search and graph traversal.
- Indexed 100+ code files and reduced retrieval latency by 35% using hybrid retrieval.

Invoice Maker – Invoicing Platform Website

- Built a web and mobile invoicing product for creating, managing, and exporting professional business invoices.
- Designed a responsive multi-platform workflow for quickly generating customer-ready invoices.

Additional Projects

Expensio – Full-stack expense manager with dashboards, recurring transactions, budgeting, and CSV/PDF export Next.js / Supabase

Money Lens – Financial RAG platform for natural-language analysis of financial data AI / RAG

Stock Market Dashboard – Interactive market analytics and visualization platform Data / Analytics

Experience

Teaching Assistant – Programming Fundamentals Sep 2025–Present
Punjab University College of Information Technology (PUCIT) Lahore, Pakistan

- Ran weekly C++ and OOP labs for 50+ first-year students, helping them debug programs and understand core concepts.
- Graded 100+ lab submissions with feedback on algorithms, code quality, and memory management.

Leadership

Head of Production – FCIT Information & Media Society Oct 2025–Present
Punjab University College of Information Technology (PUCIT) Lahore, Pakistan

- Led media production and video shoots for 15+ faculty society events reaching 800+ students.

Media Team Member – Pioneer Debating Society Dec 2025–Present
Punjab University College of Information Technology (PUCIT) Lahore, Pakistan

Campus Ambassador – TechnoVerse CUI Lahore / The TalentBeacon Apr 2025–Present
Punjab University College of Information Technology (PUCIT) Lahore, Pakistan
